IBM DATA SCIENCE CAPSTONE PROJECT

Introduction:

Paris and the city of Toronto, Ontario are the capital cities their respective countries and are popular for being tourist destinations

I would like to review how the neighborhoods are distributed in the city, and how popular destinations are scattered across both the cities.

Data:

I have already prepared data of Toronto city for my assignment in previous week. I will take similar steps to prepare data for the list of Paris, Italy.

I will try to find similarities and dissimilarities in both the cities and will make a report of my findings
